LANDSCAPING SOILS

ULTRAGROW SOILS

The UltraGROW Garden Soil range available exclusively at Centenary Landscaping Supplies, together comprise the largest and most comprehensive manufactured growing media ('Soil') range available in the retail market. Whether you are planting a new garden bed, filling some holes in the lawn or topping up an existing bed, we can help you select the top soil for the job.

Homeowners spend hundreds of dollars choosing the right plants or turf to suit your project and conditions, so it is important you choose a quality soil to help nurture and enrich your gardens to encourage healthy, prolonged plant growth. It's a one off investment that can pay off for years to come.

Various plants have a distinct preference or particular requirement when it comes to soil suitability.

For this reason it is important to select an appropriate soil, fit for use for optimum results in your circumstance. If in doubt, please seek the advice of a soil specialist at Centenary Landscaping Supplies. In some cases, it may be required to add specific fertilisers to the growing medium to achieve satisfactory results.

DEFINITIONS (AS-4419)

Organic matter - The component of soil composed of organic compounds that have come from the remains of organisms such as plants and animals and their waste products in the environment.

Soils for turf and lawns - A soil which is suitable for turf underlay and/or top dressing for turf and lawn.

Landscaping soils - Soils suitable for landscape and garden applications (on grade).

Natural Soil: A soil that has been excavated from the ground.

Neutral soils - Soils that have a pH of 6.1-7.5.

SOIL CLASSIFICATION (AS-4419)

Soils shall be classified into the following categories:

- Landscape soils (on grade).
- Low density media (on slab).
- Soils for turf and lawns.
- Specialist soils.

BLACK LABEL GARDEN SOIL

A bespoke mix prepared exclusively for Centenary Landscapes Supplies. It is scientifically blended from ideal components to create an industry leading growing media, free of liquid and green waste.

The mineral components form a diverse particle profile and complementary chemical spectrum, made from natural soils and rock minerals. Black Label contains a high concentration of Microbial Inoculants designed to make the soil a living organism, primed for immediate plant establishment and growth.

Black Label is a blend of natural top soil, enriched compost consisting of composted cow manure, rock minerals, bio-char, microbial inoculants, sea-weed, blood and bone, gypsum, wormcasts, fish Meal, silica and long-term soil wetters (wetting granules, soil conditioners and biophilic compounds).

GROWING MEDIA YOU CAN TRUST

SUPREME GARDEN SOIL

Supreme is formulated with composted garden organics and blended with natural soils and sand. Chicken manure is added to boost performance. This is a good all round garden blend but not for top dressing lawns. Improve growth results by adding Multi Pro Xtra or E-Scape Pro (9 month feed) or Hydro TerraPlex (24 month feed) Reduce watering by up to 50% by adding Hydro Plex.

LANDSCAPING SOILS CONT

TRADE SOIL MIX

A mix of "dirt" and composted green waste making it ok for filling larger beds but there will be slumpage. It must be fertilised with the appropriate fertiliser for healthy growth.

\$59⁸⁰_T

1.0T = 1M³
\$59.80 M³
\$6.90 ^{25L}

ECONO SOIL BLEND

A budget mix with a high level of green and liquid waste component suitable for most large applications. A lot of feeding / fertilizer is essential for good plant growth. It can be inconsistent from load to load due to the budget nature of this mix.

\$49⁷⁰_T

1.0T = 1M³
\$49.70 M³
\$5.90 ^{25L}

NATURAL SOILS

Natural top soils are soils scraped from the top layer of earth. They are screened and rich in natural ingredients that are great for your plants and lawn. As they are untreated, they will need the addition of compost and fertiliser for best results. Natural soils make the perfect starting point when blending custom soil for your specific requirement.

VALLEY NATURAL SOIL

This is our first high quality natural soil and is low in phosphorus which makes it suitable for native. Suitable for garden beds, vegetable garden beds with correct fertiliser, under turf. It's free of green waste. It is the perfect base soil for blending your own composts or producing custom soil blends.

\$87⁰⁰_T

1.2T = 1M³
\$104.40 M³
\$8.50 ^{25L}

SCREENED NATURAL SOIL

A finely screened (6mm) natural top soil perfect as a base soil for blending your own composts or producing custom soil blends. Is classified as a natural top soil as it has no added organic component. Can be used as a under turf soil mix or as a top dressing in thin layers.

\$46²⁰_T

1.2T = 1M³
\$55.44 M³
\$8.50 ^{25L}

TURF UNDERLAY SOILS

A new lawn needs approximately 100mm of good friable soil to set root. This can take between 7 and 30 days depending on the time of year. When laying a new lawn, we recommend mechanically working your new under turf soil mix into your existing top soil for best results. If using a soil without any added fertilisers, the application of an organic based fertiliser such as Organic Xtra or Multipro is recommended.

UNDER TURF SOIL

This a new garden and turf underlay based on a natural top soil with the addition of a small amount of organics and a pH around 7. It's also excellent for all garden uses. It is a blackish natural soil with a nice clay content compared to most sandy soils on the market. It has become very popular due to its dark soil look and smell.

Other under turf options include:

- Black Label Garden Soil
- Special Blend Top Dressing
- Screened Natural Soil
- Valley Lawn & Garden Soil
- Valley Natural Soil

\$68²⁵_T

1.1T = 1M³
\$75.07 M³
\$7.50 ^{25L}

TOP DRESSING SOILS

Top dressing should be applied at the rate of 10mm to 15mm thick (1m³ to 1.5m³ of top dressing covers 100m²) making sure the blades of grass are visible. Prior to top dressing, it is recommended you mow your lawn shorter than normal and keep water frequently until fully recovered.

A1 TOP DRESSING SOIL

An excellent light composted organic top dressing option made up of screened organic compost and sand. A1 has a nice balance of nutrients and manure. It helps to increase nutrient retention, improves drainage.

\$79⁰⁰_T

1.0T = 1M³
\$79.00 M³

SPECIAL BLEND TOP DRESSING SOIL

Special Blend is the soil that started it all for Centenary some 25 years ago. It has been through some change in those years and now is a top performing product that pays homage to the original formula. Special Blend is a wonderful natural finely screened top soil combined with a mix of enriched compost including cow manure, rock minerals, blood and bone, fish meal, sea-weed and sulfate of potash. It can be used both under and over turf or as a finely screened garden soil.

\$85⁰⁰_T

1.1T = 1M³

CARING FOR YOUR SOIL

Soil, like all other aspects of your garden is constantly changing and requires care and maintenance to ensure continued healthy plant growth. There are a number of things you can do to ensure your soil stays healthy, and a regular maintenance program is just as important as the initial soil selection.

The **UltraGROW Soil Range** is designed to be fit for purpose. This means that each soil in the range is designed to be used for specific purposes. Using the correct soil for your project ensures the greatest possible start for your plants and lawn.

REGULAR FEEDING It is important for the health of your soil and plants to keep a regular fertilising regime. This will ensure prolonged healthy growth and results.

MULCH YOUR SOIL Mulch is one of the most important things for healthy growth in a garden. Weed prevention and temperature control are just a few of the benefits of using mulch, while the most valuable reason is moisture control. Without mulch, natural elements rapidly dry out the soil surrounding your plants, increasing the need to water on a regular basis. Mulch will help retain the water in your garden beds, reducing water usage. As mulch breaks down, it also adds organic content back into the depleted soil encouraging microbial activity.

ONLY USE FRESH NEW TOP SOIL Never store your soil for prolonged periods. This is the worst thing you can do as soil is a living and breathing organism. A number of our soils contain Microbial inoculants which make the soil a living organism, storing your soil for extended periods can kill these micro organisms making the soil stale.

NEVER MECHANICALLY COMPACT

Soil is full of organic matter that breaks down over time and because of this, soils can be easily compacted, either by driving on it or driving over with compaction machinery. The soils structure needs to remain open so that air and water can freely pass through the top soil to the root zone. Along with nutrients, these are vital for good plant growth.

UltraGrow

AUTUMN LAWN CARE

Put in the hard work now to prepare your lawn for the winter ahead. Just like the springtime, autumn is an extremely important time of year for your lawn. The time, care and effort you put into your lawn now will leave you in good stead for the colder months ahead and give you the best chance to keep your lawn healthy through the winter until next spring.

LAWN GRUBS The dreaded lawn grub is out in force through the autumn. Lawn grubs can cause serious damage to your lawn unless you keep a keen eye out. Even turning your back for a week or two can end in tears for the avid green keeper.

Keep your eyes peeled for any sign of these nasty pests and treat as soon as possible with grub control chemicals.

FERTILISING Autumn is the perfect time to be fertilising your lawn to build up a healthy root system before winter sets in. The best type of fertilisers to use would be controlled-released, as the nutrients are released slowly and continually. This in turn allows the grass to take up the nutrients as it needs them, and they are less likely to leach in runoff into local native bushland or waterways.

The best time to fertilise is early in the morning when there may still be dew or moisture in the lawn to help to activation process or before a rain shower. You don't really want to be fertilising before a big storm, as more often than not, your fertiliser will wash away with the overland flow than really absorb into your soil.

MOWING As the weather cools, grass growth will slow and your mowing frequency will reduce. It is best to keep your lawn slightly longer through the cooler months so it's better equipped for photosynthesis and weed suppression. In saying that, you don't want to let your lawn get too long! If you allow your lawn to get too long between haircuts you run the risk of stress and scalping. Remove no more than a third of the green leaf blade.

Damaged grass is far more susceptible to pests and disease, so it is important to make sure it is being cut cleanly rather than "chewed". Keep your mower blades sharp!

GARDEN COMPOSTS

ENVIROGANIC PREMIUM COMPOST

\$124⁸⁰
M³
\$9.50 40L

Enviroganic Premium Compost is a biologically stable, organic fertiliser and soil conditioner processed from natural organic plant and animal material. It has a high percentage of organic carbon, twice that of raw and stockpiled manure, to feed soil microbes and organisms. It conforms to AS4454 for soil conditioners.

EARTH GROW COMPOST

\$108⁸⁸
M³
\$9.50 40L

A richly coloured & finely textured organic aged bark composted over 3-months that is pH neutral and can be used to enrich existing garden beds or as a premium quality garden mulch. It will help retain valuable moisture in the garden and assists in the control of weeds.

ACTIVE 8 COMPOST

\$12⁰⁰
60L
\$7.75 30L

A well-balanced soil improver and planting mix designed for the home gardener to plant directly into with no fuss. Organic Active 8 contains over 8 active ingredients helping to improve your soil and also feed your plants.

MULTI PRO FERTILISER & CONDITIONER

\$40⁹⁵
25kg

An organic based fertiliser & soil conditioner derived from fully composted animal manures with added rock minerals, bio-char, soil inoculants and control release fertiliser. Multi Pro benefits the soil and bio organisms contributing to continuous long term plant health. Multi Pro contains fertilisers, soil conditioners, clay breaker, wetting agents and bio-inoculants.

NPK: N-2.8 P-1.4 K-2.8 + full trace elements & organic carbon@ 16.2%

POTTING MIXTURES

ULTRAGROW PLATINUM POTTING MIX

\$257⁰⁰
M³
\$13.99 25L

Centenary Landscapes contracted John Daly to create this unique scientifically formulated premium plus potting mix which exceeds the Australian Standard 3743. We manufacture here at Darra. It consists of blended composted bark (0 -12mm), organics, minerals, coco peat and HydroPlex Wetter to boost water holding capacity by up to 50% while enhancing cation exchange. We've included MultiPro Xtra to improve plant nutrition which will develop over time due to the microbial inoculants. The addition of E-Scape Pro feeds for up to 9 months. It has a bulk density of 0.63. It is free of green & liquid waste found in most cheap and even expensive bagged mixes designed to cut costs while sacrificing quality resulting in poor plant growth which you will blame yourself for. We guarantee you success with spectacular growth you never thought possible for your expensive plants.

UltraGrow
SPECIALISED PLANT CARE

PREMIUM POTTING MIX (ROCKY POINT)

\$16⁹⁵
60L
\$8.95 30L

Certified to the Australian Standards for a Premium Potting Mix the new Rocky Point Mulching Premium Potting Mix is charged with active organic nutrients. It is the obvious choice for all types of plants.

LOW DENSITY MEDIA

HYPODIUM 40 PLANTER MIX

\$145⁰⁰
T
0.8T = 1M³
\$116.00 M³

Hypodium 40 is a low density planting media designed specifically for large container gardens or podium level gardens. This mix consists of a scientifically blended combination of a high quality natural soil, screened ash, coir fibre and composted bark fines, to create a light free draining mix with good moisture holding capacity.

UltraGrow
SPECIALISED PLANT CARE

WATER HOLDING ADDITIVES

HYDRO PLEX

\$48⁵⁰
25L

A natural long lasting wetting agent made up from organic rock fossil granules that don't break down like crystals. It's a hydrophilic complex of wetting granules, soil conditioners and biophilic compounds that increases the water holding capacity by up to 148%, when added to sandy soil substrates at 5% inclusions into landscape and potting mixes. It insulates, aerates and promotes capillary action without water logging. It increases the cation exchange capacity to hold nutrition in the soil profile without leaching to the environment.

COIR FIBRE

\$193⁹³
M³
\$12.50 40L

Coir is a peat-like substance made from the pith found between the coconut fibers. The coir pith gets washed, heat treated, sieved, to remove large particles and graded. It improves the air porosity of soils, even when wet, and aids in moisture retention. Coir absorbs 30% more water than peat and is much, much easier to re-wet, when dry.

BARKS & MULCHES

70 BLENDED CYPRESS FINES

A blend of fines and small chip from the cypress pine tree - reported to deter white ants and termites from your garden.

\$85⁵⁰ M³
\$7.10 40L

74 CHUNKY PINE BARK

This consists of 2" chunks of clean tan bark, free of all the fine dust and small pieces that often makes up 30% of normal pine bark. It looks great in the garden.

\$91⁹⁰ M³
\$7.10 40L

73 COTTAGE PINE BARK

This consists of 1" chunks of clean tan bark. The small golden nuggets make this a very popular bark with its soft texture making it suitable for your indoor or outdoor landscape environment.

\$91⁹⁰ M³
\$7.10 40L

64 COLOURED RED MULCH

A vibrant dyed red mixed wood chip. A simple, safe and cost effective solution to add a beautiful pop of colour to any garden or landscape.

\$97¹⁵ M³
\$8.00 40L

68 CYPRESS WOOD CHIP

A clean golden wood chip of around 1" from the cypress pine tree.

\$81⁹⁰ M³
\$7.10 40L

64 FOREST MULCH GROUND COVER

This is a coarse, budget mulch consisting of a greenwaste material that has been once tub ground. *Please Note: it may contain foreign matter. We offer no guarantees for the content of this mulch. It is highly recommended the product is viewed in person prior to ordering.

\$24⁷⁰ M³
\$5.00 40L

63 GREEN HARVEST MULCH

12- week composted garden organics from green bin collections. Processed through a star screen removing dust and unwanted material.

\$49⁷⁰ M³
\$7.10 40L

67 HARDWOOD CHIP

A clean wood chip of around 1" from mixed Australian hardwood.

\$61²⁰ M³
\$7.10 40L

77 HOOP BARK FINES

A finely screened Hoop Bark with a strong dark colour and a natural "forest floor" look that has made it very popular. Ideal in rockeries and heavily planted areas for that something a little different.

\$97⁹⁰ M³
\$8.00 40L

76 HOOP MEDIUM BARK

Coarse curly bark of around 1" thick pieces of strong dark coloured bark that holds on embankments and has a pleasing natural appearance. Used by landscapers, it is our most popular bark.

\$97⁹⁰ M³
\$8.00 40L

72 MINI NUGGETS PINE BARK

This consists of 15mm nuggets of clean tan bark. A great mulch with a light texture and red/brown colour. These little pieces are a delight in most gardens.

\$91⁹⁰ M³
\$7.10 40L

69 RED CYPRESS MULCH

An attractive fibrous cypress mulch with a deep, rich red/brown colour; suitable for all gardens.

\$99⁵⁰ M³
\$8.00 40L

65 SCRUB MULCH

Greenwaste mulch ranging from fine to chunky. Tub ground and sourced from land clearing. *Please Note: it may contain foreign matter. We offer no guarantees for the content of this mulch. It is highly recommended the product is viewed in person prior to ordering.

\$37⁰⁰ M³
\$5.00 40L

65 SOFT FALL PINE BARK

A finely screened pine bark consistent and clean with 10mm nuggets often used in school playgrounds. It's also ideal for mulching small gardens, or heavily planted areas.

\$152⁰⁰ M³
\$12.00 40L

71 TAKURA SOFT FALL

Takura is an engineered woodchip, pale in colour and suitable for use in all children's play areas as a pine bark alternative.

\$147⁵⁰ M³
\$12.00 40L

66 TEA TREE MULCH

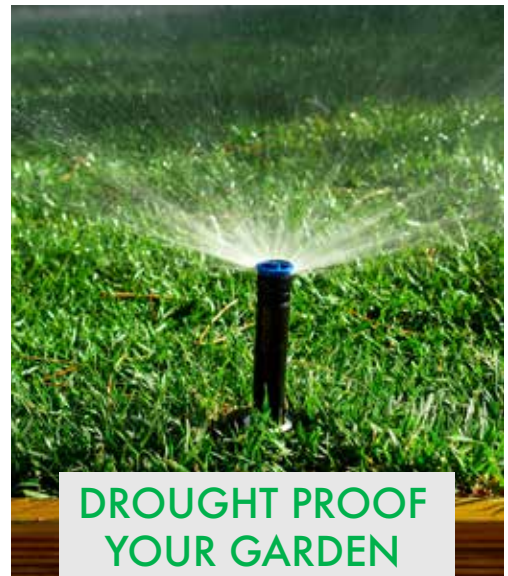

Fibrous dark mulch from the Tea Tree, which gives a natural and different look to your garden. It has a pleasant bush fragrance - reported to deter white ants and termites from your garden.

\$81²⁰ M³
\$7.10 40L

62 TROPICAL CYPRESS BLEND

A good blend of cypress bark & wood chip that is one of the most economical of the cypress blends.

\$81²⁰ M³
\$7.10 40L

COVER YOUR SOIL Mulch is one of the most important things for the healthy growth of a garden. Weed prevention and temperature control are just a few of the benefits of using mulch, while the most valuable reason is moisture control. Without mulch, natural elements rapidly dry out the soil surrounding your plants, increasing the need to water on a regular basis. Mulch will help retain the water in your garden beds, reducing water usage.

STORE YOUR WATER With Queensland in states of drought at various times, water is precious. Inevitably we are going to face more water restrictions. Now is the time to instal water capturing systems. When planning a new lawn or garden, take the time to install in-ground irrigation systems like drippers which will slowly and efficiently serve up your plants just the right amount of water with zero wastage.

MAXIMISE MOISTURE Soil additives such as organic composts, zeolite, perlite and **Hydro Plex** are all designed to maximise water retention in the soil. A plant can only take up so much water at any given time, so saturating your sandy soil once a week, something that might seem efficient, will only feed your plants for a short time before drying out.

Choose from 5 different lawn species at Centenary, your local turfing specialists!

SIR WALTER DNA CERTIFIED BUFFALO

Sir Walter DNA Certified Buffalo Grass is Australia's favourite lawn; it's easy to maintain, stays green all year round and is very drought tolerant. Ideal for homes with children, family pets, shaded areas and sunny backyards, Sir Walter DNA Certified is the most versatile lawn option for the Queensland climate.

\$11.47
M²
CUT DAILY

CUT & DELIVERED SAME DAY • SUPPLIED WITH CERTIFICATE OF AUTHENTICITY • 100% QUALITY GUARANTEED

NULLARBOR COUCH

\$5.75
M²

Nullarbor Couch grass is a durable and robust fine-leaf couch turf variety with a soft texture and dense growth pattern. It has great winter colour retention.

PLATINUM ZOYSIA

\$11.50
M²

Platinum Zoysia has an eye catching dark green colour and a luxurious soft-to-the-touch feel. When kept it is one of the most beautiful lawns available. The choice of real lawn purists!

AUSSIE BLUE COUCH

\$7.95
M²

Aussie Blue is a beautiful, natural looking turf grass very similar to QLD Blue Couch, with a blue-green colour and a soft, lush feel and a fine-medium leaf blade.

PICK UP YOUR TURF BY THE SLAB

Including:

- Sir Walter DNA Certified Buffalo
- Aussie Blue Couch
- Platinum Zoysia
- Nullarbor Couch

Others available on request.

Small premium applies to yard stock.

Turf is available to pick up throughout the week and over the weekend - Supply on-site is limited and not available everyday so we recommend you order in advance to avoid missing out.

Centenary Landscaping Supplies reserves the right to change prices without notice. All prices may be subject to delivery charges and stock availability.
